HAYWARD®

IMPORTANT SAFETY INSTRUCTIONS

Basic safety precautions should always be followed, including the following: Failure to follow instructions can cause severe injury and/or death.

⚠ This is the safety-alert symbol. When you see this symbol on your equipment or in this manual, look for one of the following signal words and be alert to the potential for personal injury.

⚠ WARNING warns about hazards that could cause serious personal injury, death or major property damage and if ignored presents a potential hazard.

⚠ CAUTION warns about hazards that will or can cause minor or moderate personal injury and/or property damage and if ignored presents a potential hazard. It can also make consumers aware of actions that are unpredictable and unsafe.

The **NOTICE** label indicates special instructions that are important but not related to hazards.

READ AND FOLLOW ALL INSTRUCTIONS

⚠ WARNING - Read and follow all instructions in this owner's manual and on the equipment. Failure to follow instructions can cause severe injury and/or death.

⚠ WARNING – This product should be installed and serviced only by a qualified professional.

⚠ CAUTION – All electrical wiring **MUST** be in conformance with all applicable local codes, regulations, and the National Electric Code (NEC).

USE OF NON-HAYWARD REPLACEMENT PARTS VOIDS WARRANTY.

ATTENTION INSTALLER - THIS MANUAL CONTAINS IMPORTANT INFORMATION ABOUT THE INSTALLATION, OPERATION, AND SAFE USE OF THIS VARIABLE SPEED PUMP THAT MUST BE FURNISHED TO THE END USER OF THIS PRODUCT. FAILURE TO READ AND FOLLOW ALL INSTRUCTIONS COULD RESULT IN SERIOUS INJURY.

⚠ WARNING – To reduce risk of injury, do not permit children to use or climb on this product. Closely supervise children at all times. Components such as the filtration system, pumps, and heaters must be positioned to prevent children from using them as a means of access to the pool.

⚠ CAUTION – This pump is intended for use on permanently installed swimming pools and may also be used with hot tubs and spas if so marked. Do **NOT** use with storable pools. A permanently installed pool is constructed in or on the ground or in a building such that it cannot be readily disassembled for storage. A storable pool is constructed so that it is capable of being readily disassembled for storage and reassembled to its original integrity. Though this product is designed for outdoor use, it is strongly advised to protect the electrical components from the weather. Select a well-drained area, one that will not flood when it rains. It requires free circulation of air for cooling. Do not install in a damp or non-ventilated location. If installed within an outer enclosure or beneath the skirt of a hot tub or spa, adequate ventilation and free circulation of air must be provided to prevent overheating of the motor.

For warranty information, please go to www.hayward.com/warranty.

SAVE THESE INSTRUCTIONS

⚠ WARNING – Pool and spa components (seals, gaskets, etc.) have a finite life. All components should be inspected frequently and replaced at least every ten years, or if found to be damaged, broken, cracked, missing, or not securely attached.

 **⚠ WARNING – Risk of Electric Shock.** All electrical wiring **MUST** be in conformance with applicable local codes, regulations, and the National Electric Code (NEC). Hazardous voltage can shock, burn, and cause death or serious property damage. To reduce the risk of electric shock, do **NOT** use an extension cord to connect unit to electric supply. Provide a properly located electrical receptacle. Before working on pump or motor, turn off power supply to the pump.

⚠ WARNING – To reduce the risk of electric shock replace damaged wiring immediately. Locate conduit to prevent abuse from lawn mowers, hedge trimmers and other equipment.

⚠ WARNING – Risk of Electric Shock. In accordance with the National Electric Code (NEC), connect only to a branch circuit protected by a ground-fault circuit-interrupter (GFCI). Contact a qualified electrician if you cannot verify that the circuit is protected by a GFCI. The unit must be connected only to a supply circuit that is protected by a ground-fault circuit-interrupter (GFCI). Such a GFCI should be provided by the installer and should be tested on a routine basis. To test the GFCI, push the test circuit button. The GFCI should interrupt power. Push the reset button. Power should be restored. If the GFCI fails to operate in this manner, the GFCI is defective. If the GFCI interrupts power to the pump without the test button being pushed, a ground current is flowing, indicating the possibility of an electric shock. Do not use this pump. Disconnect the pump and have the problem corrected by a qualified service representative before using.

⚠ WARNING – Failure to bond pump to pool structure will increase risk for electrocution and could result in injury or death. To reduce the risk of electric shock, see installation instructions and consult a professional electrician on how to bond pump. Also, contact a licensed electrician for information on local electrical codes for bonding requirements.

Notes to electrician: Use a solid copper conductor, size 8 or larger. Run a continuous wire from external bonding lug to reinforcing rod or mesh. Connect a No. 8 AWG (8.4 mm²) [No. 6 AWG (13.3 mm²) for Canada] solid copper bonding wire to the pressure wire connector provided on the pump housing and to all metal parts of swimming pool, spa, or hot tub, and to all electrical equipment, metal piping (except gas piping), and conduit within 5 ft. (1.5 m) of inside walls of swimming pool, spa, or hot tub. **IMPORTANT** - Reference NEC codes for all wiring standards including, but not limited to, grounding, bonding and other general wiring procedures.

⚠ WARNING – Suction Entrapment Hazard. Suction in suction outlets and/or suction outlet covers, which are damaged, broken, cracked, missing, or unsecured cause severe injury and/or death due to the following entrapment hazards (symbols complements of APSP):

Hair Entrapment - Hair can become entangled in suction outlet cover.

Limb Entrapment - A limb inserted into an opening of a suction outlet sump or suction outlet cover that is damaged, broken, cracked, missing, or not securely attached can result in a mechanical bind or swelling of the limb.

Body Suction Entrapment - A differential pressure applied to a large portion of the body or limbs can result in an entrapment.

Evisceration/ Disembowelment - A negative pressure applied directly to the intestines through an unprotected suction outlet sump or suction outlet cover which is damaged, broken, cracked, missing, or unsecured can result in evisceration/disembowelment.

Mechanical Entrapment - There is potential for jewelry, swimsuits, hair decorations, fingers, toes, or knuckles to be caught in an opening of a suction outlet cover resulting in mechanical entrapment.

▲ WARNING – To Reduce the risk of Entrapment Hazards:

- When outlets are small enough to be blocked by a person, a minimum of two functioning suction outlets per pump must be installed. Suction outlets in the same plane (i.e. floor or wall), must be installed a minimum of three feet (3') [0.91 meter] apart, as measured from near point to near point.
- Dual suction fittings shall be placed in such locations and distances to avoid “dual blockage” by a user.
- Dual suction fittings shall not be located on seating areas or on the backrest for such seating areas.
- The maximum system flow rate shall not exceed the values shown in the “Pipe Sizing Chart” found in section 4.3 below.
- Never use pool or spa if any suction outlet component is damaged, broken, cracked, missing, or not securely attached.
- Replace damaged, broken, cracked, missing, or not securely attached suction outlet components immediately.
- In addition to two or more suction outlets per pump installed in accordance with latest APSP standards and CPSC guidelines, follow all national, state, and local codes applicable.
- Installation of a vacuum release or vent system, which relieves entrapping suction, is recommended.

▲ WARNING – Hazardous Pressure. Pool and spa water circulation systems operate under hazardous pressure during start-up, normal operation, and after pump shut-off. Stand clear of circulation system equipment during pump start-up. Failure to follow safety and operation instructions could result in violent separation of the pump housing and cover due to pressure in the system, which could cause property damage, severe personal injury, or death. Before servicing pool and spa water circulation system, all system and pump controls must be in off position and filter manual air relief valve must be in open position. Before starting pump, all system valves must be set in a position to allow system water to return back to the pool. Do not change filter control valve position while pump is running. Before starting pump, fully open filter manual air relief valve. Do not close filter manual air relief valve until a steady stream of water (not air or air and water mix) is discharged from the valve. All suction and discharge valves **MUST** be OPEN when starting the circulation system. Failure to do so could result in severe personal injury and/or property damage.

▲ WARNING – Separation Hazard. Failure to follow safety and operation instructions could result in violent separation of pump components. Strainer cover must be properly secured to pump housing with strainer cover lock ring. Before servicing pool and spa circulation system, all system and pump controls must be in off position and filter manual air relief valve must be in open position. Do not operate pool and spa circulation system if a system component is not assembled properly, damaged, or missing. Do not operate pool and spa circulation system unless filter manual air relief valve body is in locked position in filter upper body. All suction and discharge valves **MUST** be OPEN when starting the circulation system. Failure to do so could result in severe personal injury and/or property damage.

▲ WARNING – Never operate the circulation system at more than 50 PSI maximum.

▲ WARNING – Fire and burn hazard. Motors operate at high temperatures and if they are not properly isolated from any flammable structures or foreign debris they can cause fires, which may cause severe personal injury or death. It is also necessary to allow the motor to cool for at least 20 minutes prior to maintenance to minimize the risk for burns.

▲ WARNING – Failure to install according to defined instructions may result in severe personal injury or death.

SAVE THESE INSTRUCTIONS

⚠ WARNING	
<ul style="list-style-type: none"> • INGESTION HAZARD: This product contains a button cell or coin battery. • DEATH or serious injury can occur if ingested. • A swallowed button cell or coin battery can cause Internal Chemical Burns in as little as 2 hours. • KEEP new and used batteries OUT OF REACH OF CHILDREN. • Seek immediate medical attention if a battery is suspected to be swallowed or inserted inside any part of the body. 	

⚠ WARNING – Even used batteries may cause death or serious injury.

⚠ WARNING – Call a local poison control center for treatment information.

⚠ WARNING – Remove and immediately recycle or dispose of used batteries according to local regulations and keep away from children. Do NOT dispose of batteries in household trash or incinerate.

⚠ WARNING – This product contains non-rechargeable batteries. Do NOT force discharge, recharge, disassemble, heat above 85°C, or incinerate. Doing so may result in injury due to venting, leakage, or explosion resulting in chemical burns.

⚠ WARNING – This product contains non-replaceable batteries. Do NOT under any circumstances attempt to remove or replace the factory-installed battery.

⚠ WARNING – Non-rechargeable batteries are not to be recharged.

NOTICE – This product contains a Panasonic BR1225 coin-type lithium battery.

NOTICE – The nominal voltage of the battery contained within this product is 3V.

Certificate of Conformity

Product: 400/600/800 Series Variable Speed Pumps

CPSC Regulation: Safety Standard for Button Cell or Coin Batteries and Consumer Products Containing Such Batteries
Underwriters Laboratories UL 4200A-2023

Manufacturer: Hayward Industries
1415 Vantage Park Drive, Suite 400, Charlotte, NC 28203
Technical Service Phone: (908) 355-7995

Manufacture Location: Hayward Industries, One Hayward Industrial Drive, Clemmons, NC 27012

Date Manufactured: The serial number is a 17 digit number
Example serial number: 21122305456789001
The 5th - 8th digits are the “year & month” of the date of manufacture
Example above is the 5th month of 2023

Tested By: Hayward Industries, One Industrial Drive, Clemmons, NC 27012
Phone: (908) 355-7995
Test Report: November 2024

Overview

This manual contains information for the proper installation and operation of the 400/600/800 series variable speed pump family and **MUST** be followed.

Product Dimensions

Installation

Pump Location

Locate pump as close to the pool as possible, in compliance with local codes. To reduce friction loss, suction lines should be as direct as they can be. Suction lines should have continuous slope upward from lowest point in line. Joints must be tight (but not over-tightened). Suction line diameter must equal to or larger than the discharge line diameter.

Though the pump is designed for outdoor use, it is advised to place both the pump and filter in the shade to protect them from continuous direct exposure to the sun. Select a well-drained area that will not flood when it rains. Do NOT install pump and filter in a damp or non-ventilated location. Keep motor clean. Pump motors require free circulation of air for cooling.

Pump Mounting

Install pump on a level concrete slab or other rigid base to meet all local and national codes. Secure pump to base with screws or bolts to further reduce vibration and stress on pipe or hose joints. The base must be level, rigid, and vibration free.

Pump mount must:

- Allow pump inlet height to be as close to water level as possible.
- Allow use of short, direct suction pipe (to reduce friction losses).
- Allow for valves in suction and discharge piping.
- Be protected from excess moisture and flooding.
- Allow adequate access for servicing pump and piping.

Pipe Sizing Chart

Maximum Recommended System Flow Rate by Pipe Size		
Pipe Size in. [mm]	Maximum Flow Rate GPM [LPM]	Minimum Straight Pipe Length "L" in. [mm]*
1 ½ [50]	45 [170]	7 ½ [190]
2 [63]	80 [300]	10 [254]
2 ½ [75]	110 [415]	12 ½ [317]
3 [90]	160 [600]	15 [381]

Note: It is recommended that a minimum length of straight piping (shown as "L" in above diagram), equivalent to 5 pipe size diameters, be used between the pump suction inlet and any plumbing fittings (elbows, valves, etc.).

When installing the pump, care should be taken to ensure proper pipe and equipment sizing to handle the maximum flow required. It is recommended to set the maximum speed in order to not exceed the maximum flow rate.

⚠ WARNING – Hazardous Pressure. Pumps, filters, and other equipment/ components of a swimming pool filtration system operate under pressure. Incorrectly installed and/or improperly tested filtration equipment and/or components may fail resulting in severe personal injury or death.

Plumbing

1. Use PTFE tape to seal threaded connections on molded plastic components. All plastic fittings must be new or thoroughly cleaned before use. NOTE - Do NOT use Plumber's Pipe Dope as it may cause cracking of the plastic components. When applying PTFE tape to plastic threads, wrap the entire threaded portion of the male fitting with one to two layers of tape. Wind the tape clockwise as you face the open end of the fitting, beginning at the end of the fitting. The pump suction and outlet ports have molded-in thread stops. Do NOT attempt to force hose connector fitting past this stop. It is only necessary to tighten fittings enough to prevent leakage. Tighten fitting by hand and then use a tool to engage fitting an additional 1 ½ turns. Use care when using PTFE tape as friction is reduced considerably; do NOT over-tighten fitting or you may cause damage. If leaks occur, remove connector, clean off old PTFE tape, re-wrap with one to two additional layers of PTFE tape, and re-install connector.
2. Fittings (elbows, tees, valves, etc.) restrict flow. For better efficiency, use the fewest possible fittings. Avoid fittings that could cause an air trap. Pool and spa fittings MUST conform to the International Association of Plumbing and Mechanical Officials (IAPMO) standards.

Electrical

⚠ WARNING – All electrical wiring MUST conform to local codes, regulations, and the National Electric Code (NEC).

⚠ WARNING – Ground and bond pump before connecting to electrical power supply. Failure to ground and bond pump can cause serious or fatal electrical shock hazard. Do NOT ground to a gas supply line. To avoid dangerous or fatal electrical shock, turn OFF power to pump before working on electrical connections. Fire Hazard - match supply voltage to pump nameplate voltage. Ensure that the electrical supply available agrees with the pump's voltage, phase, and cycle, and that the wire size is adequate for the amps rating and distance from the power source. Use copper conductors only.

Electrical Specs

Refer to motor nameplate for voltage and current ratings. Use copper conductors only. For indoor & outdoor use. Connect pump to an appropriately sized/rated branch circuit protector in accordance with local codes, regulations, and the National Electric Code (NEC). A disconnecting means located at least 5 ft. from the inside wall of the pool, spa, or hot tub must be provided.

Voltage

Voltage at pump MUST NOT be more than 10% above or below nameplate rated voltage, or components may overheat, causing overload tripping and reduced component life. If voltage is less than 90% or more than 110% of rated voltage when pump is running at full load, consult the power company.

Grounding and Bonding

1. Install, ground, bond, and wire pump in accordance with local or national electrical code requirements.
2. Permanently ground pump. Use green ground terminal provided under access plate; use size and type wire required by code. Connect ground terminal to electrical service ground.
3. Bond pump to pool structure. Bonding will connect all metal parts within and around the pool with a continuous wire. Bonding reduces the risk of a current passing between bonded metal objects, which could potentially cause electrical shock if grounded or shorted. Reference NEC codes for all wiring standards including, but not limited to, grounding, bonding and general wiring procedures.
4. Use a solid copper conductor, size 8 or larger. Run wire from external bonding lug to reinforcing rod or mesh. Connect a No. 8 AWG (8.4 mm²) [No. 6 AWG (13.3 mm²) for Canada] solid copper bonding wire to the pressure wire connector provided on the motor housing and to all metal parts of swimming pool, spa, or hot tub, and to all electrical equipment, metal piping (except gas piping), and conduit within 5 ft. (1.5 m) of inside walls of swimming pool, spa, or hot tub.

Input Power

⚠ WARNING – All electrical wiring MUST conform to local codes, regulations, and National Electric Code (NEC). Pump MUST be permanently connected to circuit. Connect pump to an appropriately sized/rated branch circuit protector in accordance with local codes, regulations, and the National Electric Code (NEC). Use the circuit breaker as the master On-Off switch.

Wiring Connections

ATTENTION: ROUTE WIRING DIRECTLY FROM FIELD CONDUIT TO TERMINAL BLOCK AS SHOWN. DO NOT BUNDLE EXCESS WIRING INSIDE DRIVE ENCLOSURE.

- USE COPPER CONDUCTORS ONLY
- ACCEPTABLE FOR FIELD WIRING
- NOT SUITABLE FOR USE WITH RIGID METAL CONDUIT
- REMOVE TEST LEADS PRIOR TO INSTALL

1. TURN OFF THE ELECTRICAL POWER AT THE CIRCUIT BREAKER.
2. Loosen the four screws securing the OmniX module and remove to gain access to the wiring compartment. Leave the module's cable connected and carefully place on top of the pump to allow space for making the main electrical connections.

Leave cable attached and temporarily rest the module on top of pump motor until wiring is complete

3. Move the selectable input voltage jumper to the appropriate position as shown below (comes pre-configured for 230 VAC). Pull the jumper straight up off the connector to disconnect. Connect line power supply wiring to the appropriate terminals. Connect ground wiring to the ground screw. Exit wiring must be routed through the conduit using proper watertight fittings.

4. After all electrical connections have been made, reinstall module onto the pump. Tighten the four screws to secure. NOTE: The OmniX module must be installed properly to provide environmental protection for the wiring compartment.
5. Connect the pump to the pool bonding system as described on page 7. A lug for bonding is provided on the top of the motor.

Temperature Sensor Installation

Install the OmniX module's water temperature sensor into the plumbing line between the pump and filter by following the steps below:

1. Drill a 3/8" [10 mm] diameter hole in the plumbing and remove all chips and burrs.
2. Insert the temperature sensor into the hole as shown in the diagram below.
3. Install the hose clamp over the temperature sensor and hand tighten until the O-ring makes an adequate seal.

IMPORTANT: DO NOT OVERTIGHTEN.

System Startup

Prior to Start-Up

If it is necessary to perform a water pressure test prior to initial use to ensure plumbing system is functioning properly, then the following criteria should be maintained for this test:

1. Have a professional perform this test.
2. Ensure all Hayward pump and system components are removed from system prior to performing test.

⚠ WARNING – If circulation equipment must remain in the plumbing system during water pressure test, do not apply more than 10 psi pressure to the system. Be sure water pressure has been released, using the filter manual air relief valve, before removing pump strainer cover.

⚠ WARNING – All suction and discharge valves **MUST** be OPEN, as well as filter air relief valve (if available) on filter, when starting the circulating pump system. Failure to do so could result in severe personal injury.

Starting/Priming the Pump

Fill strainer housing with water to suction pipe level. If water leakage occurs from anywhere on the pump or filter, DO NOT start the pump. If no leakage occurs, stand at least 10 feet from pump and/or filter and apply power to the pump. By default, the pump will prime at 100% speed for 8 minutes, but priming may take up to 10 minutes depending on hydraulic condition. To manually change the speed of the pump during priming before a bluetooth connection is made, use Manual Override described on page 13. Once priming has completed, the pump will operate at 50% speed according to its factory programmed schedule until changed using the mobile app.

⚠ WARNING – Return to filter to close filter manual air relief valve when a steady stream of water (not air or air and water) is discharged from valve. Failure to do so could result in severe personal injury.

⚠ ATTENTION – NEVER OPERATE THE PUMP WITHOUT WATER. Water acts as a coolant and lubricant for the mechanical shaft seal. NEVER run pump dry. Running pump dry may damage seals, causing leakage, flooding, and voids warranty. Fill strainer housing with water before starting motor.

⚠ ATTENTION – Do NOT add chemicals to pool/spa system directly in front of pump suction. Adding undiluted chemicals may damage pump and voids warranty.

⚠ ATTENTION – Before removing strainer cover:

1. STOP PUMP before proceeding.
2. CLOSE VALVES in suction and outlet pipes.
3. RELEASE ALL PRESSURE from pump and piping system using filter manual air relief valve. See filter owner's manual for more details.
4. Remove strainer cover and fill strainer housing with water.
5. Clean and lubricate strainer cover O-ring with "Jack's 327" if necessary.
6. Replace strainer cover on strainer housing.
7. OPEN VALVES in suction and outlet pipes.

Note: Tighten strainer cover (lock ring or hand knobs) by hand only. Do not use tools or wrenches.

Priming ability will depend on vertical length of suction lift and horizontal length of suction pipe. If pump does NOT prime within 10 minutes, stop motor and determine cause. Be sure all suction and discharge valves are open when pump is running. See Troubleshooting Guide.

OmniX Mobile App

The OmniX app allows you to control your pump from the convenience of a mobile device. With the addition of a Hayward OmniX Gateway, OmniX equipment can be controlled beyond Bluetooth range and away from home.

Bluetooth Pairing (Claiming)

Follow the steps below to pair your pump with the OmniX app.

1. Scan the QR code and download the OmniX app from the mobile app store.
2. Enable Bluetooth on your mobile device.
3. Create or login to an account in the OmniX app. An existing Hayward OmniLogic account may be used.
4. Apply power to the pump. The blue LED blinks indicating that the pump is waiting to be claimed. Note that when power is first applied to the pump, the pump will turn on for priming. To override priming, press the button on the pump 4 times.
5. Create a new site or connect to an existing OmniX site by following the instructions in the OmniX app.
6. Claim and configure the pump by following the instructions on the OmniX app. Once claimed, the blue LED will become solid.

OmniX Gateway Connection

Once the pump is claimed, you can configure and control it using the OmniX app within the typical bluetooth range of your mobile device. If you'd like to control the pump remotely through the web, you must purchase the Hayward OmniX Gateway (W3GATEWAYX1) and add it to your home's network. Once added, the Gateway will act as a bridge between your mobile device and all Hayward internet enabled equipment within your home's network.

Control Equipment from the OmniX App

Note that the OmniX app will function the same whether you are connected via bluetooth or through the web using a Hayward Gateway. Refer to the following information when using the app.

Restore Default Settings And Unclaim The Device

To restore the OmniX module to default settings and reset its claimed status to "unclaimed", follow the steps below:

1. Press and hold the OmniX module connect button until the OmniX LED begins flashing rapidly (about 7 seconds).
2. Next, press and release the OmniX module connect button 3 times.

Scan the QR Code below to download the OmniX App

- The OmniX LED will flash slowly to indicate it is no longer claimed and its settings will be restored to their default values.

Home Page

1 OmniX Gateway - If a Hayward OmniX Gateway (W3GATEWAYX1) is installed, this tile will provide access to Gateway settings. The OmniX Gateway provides internet connectivity for remote app control of OmniX Equipment.

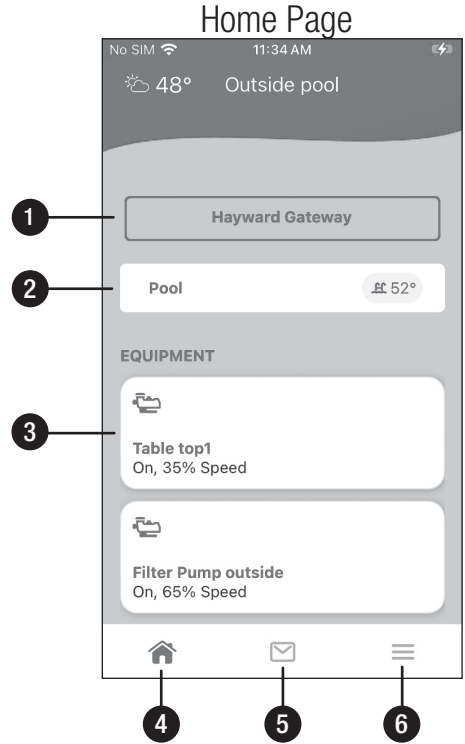

- 2 Body of Water** - Access settings for the Body of Water.
- 3 Control Tiles** - Access Equipment control page (see below).
- 4 Home Page** - Shortcut to Home page.
- 5 Messages** - Shortcut to Messages (Alerts and Notifications).
- 6 Menu** - Access to:
 - View and add Equipment
 - View and add Bodies of Water
 - View and edit Site Settings including:
 - Site Name
 - Site Address
 - Manage Guests

- Transfer Site
- Delete Site

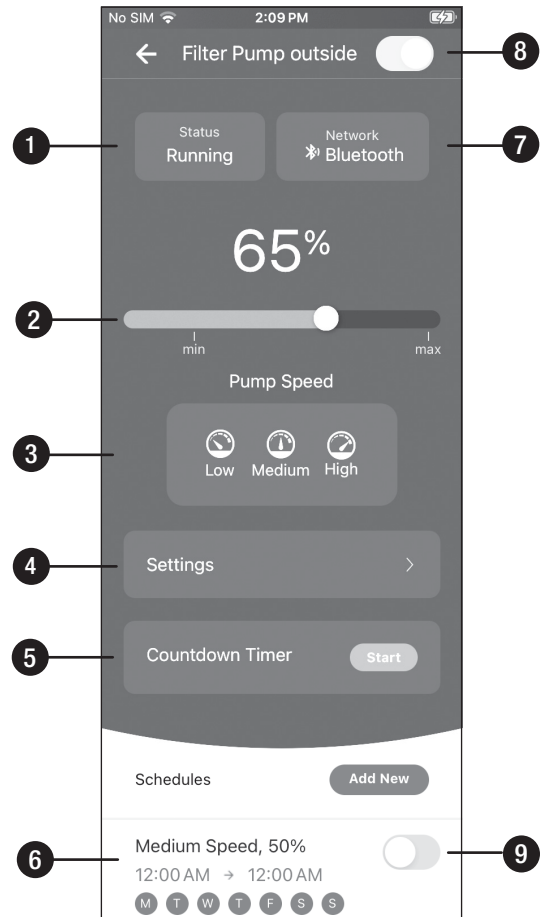

Equipment Page

- 1 Status** - Operating state.
- 2 Speed Slider** - Custom speed control slider.
- 3 Pump Speeds** - Preset speed selector.
- 4 Settings** - Pump Diagnostics, History and Equipment Settings (see next page).
- 5 Countdown Timer** - Custom countdown timers.
- 6 Schedules** - Create, delete and modify schedules.
- 7 Network** - Status of method and quality of equipment network.
- 9 Equipment Toggle** - Enable and disable pump operation.

Schedule Toggle - Enable/Disable schedules

Equipment Page

Settings Page

- 1 **Equipment Info** - Detailed pump information.
- 2 **Diagnostics** - Pump operating parameters.
- 3 **History** - Displays past diagnostic information.
- 5 **Equipment Settings** - Modify pump configuration settings (see below).

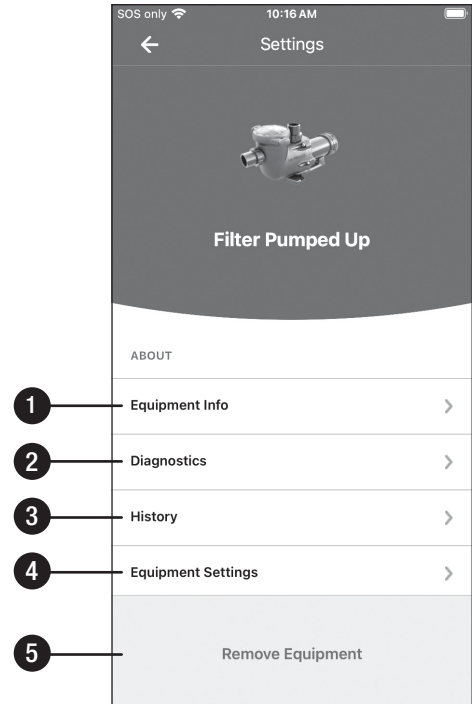

Remove Equipment - Removes the piece of equipment from the OmniX app. The equipment must be reset and reclaimed to regain control through the OmniX app. See instruc-

tions for resetting and claiming the device.

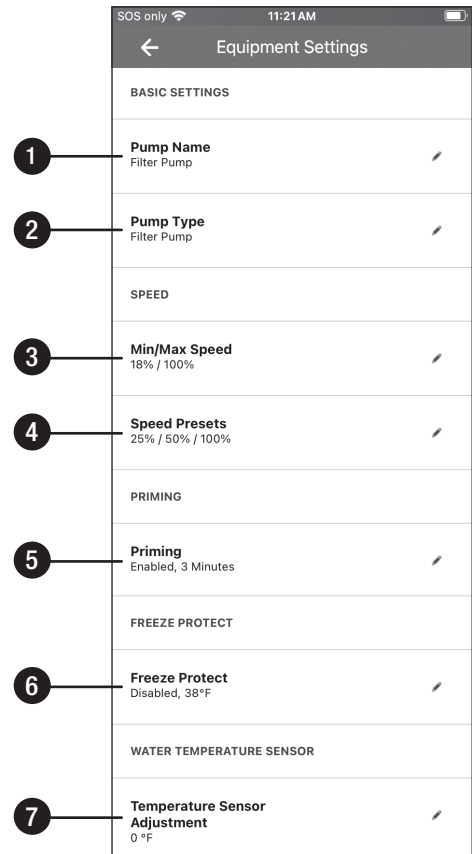

Equipment Settings Page

- 1 **Pump Name** - Edit pump name.
- 2 **Pump Type** - Change pump type (filter, accessory, booster).
- 3 **Min/Max Speed** - Edit minimum and maximum allowed speeds for the pump.
- 4 **Speed Presets** - Edit Low, Medium, and High preset speeds.
- 5 **Priming** - Edit priming configuration.
- 6 **Freeze Protect** - Edit freeze protect configuration.

Settings Page

Equipment Settings Page

7 Temperature Sensor Adjustment - Add an offset to measured reading.

Manual Override

The pump speed can be manually overridden for 3 hours by a quick **1** press and release of the **2** pump button. **3** **4**

OVERRIDE MODE - 3 hours

Manual Override Speeds

There are 3 speeds available in manual override mode:

- HIGH - 1st press
- MED - 2nd press
- LOW - 3rd press
- STOP - 4th press. NOTE: Pump will remain stopped until manually resumed.

To cycle through the speeds press the button additional times while in override mode. Manual override mode will always start at HIGH on the first press.

Note: Initiating override mode will not change the start time for the daily schedule. While in override mode, the pump will operate at a single speed for 3 hours and then will revert back to normal operation according to the programmed schedule(s). This does not apply to the STOP function and the pump will remain stopped until manual override is cancelled or a manual override speed is selected.

Legacy Operation

The pump can be operated without OmniX by disconnecting the module cable shown on page 8. For instructions to operate the pump using only the single button, refer to "Legacy Programming Instructions" found on the Hayward website. These instructions can be found by scanning the QR code below and searching for your model pump.

Troubleshooting

Motor does not restart after power cycle (pump's ring LED is blinking)

1. Press the pump button to restart. NOTE: when removing power, ensure the LED turns off completely by waiting at least 60 seconds before reapplying power.

Motor Will NOT Start

1. Check wiring according to the diagrams on page 8. Verify input voltage to the pump.
2. Be sure the pump is wired for the available field supply voltage/current according to the pump data nameplate.
3. Check for and correct any improper or loose wiring connections; open switches or relays; tripped circuit breakers, or blown fuses.
4. Manually check the rotation of the motor shaft for free movement and lack of obstruction. Correct if necessary.

Motor shuts OFF and LED is not Solid ON

1. Check for low voltage or power drop at the motor (frequently caused by undersized wiring). Contact a qualified professional to verify the electrical connections.

Motor Hums, But Does NOT Start

1. Impeller jammed with debris. Have a qualified repair professional open the pump and remove the debris.

Pump Won't Prime

1. Empty pump/strainer housing. Make sure the pump/strainer housing is filled with water and the cover o-ring is clean. Ensure the o-ring is properly seated in the cover O-ring groove. Ensure the O-ring sealing surface is lubricated with "Jack's 327" and that the strainer cover is locked firmly in position. Lubricant will help to create a tighter seal.
2. Loose connections on the suction side. Tighten the pipe/union connections.
Note: Any self-priming pump will not prime if there are suction air leaks. Leaks will result in bubbles emanating from the return fittings on the pool wall.
3. Leaking O-ring or packing glands on valves. Tighten, repair, or replace the valves.
4. Strainer basket or skimmer basket loaded with debris. Remove the strainer housing cover or the skimmer cover. Clean the basket, and refill the strainer housing with water. Tighten the cover.
5. Suction side clogged. Contact a qualified repair professional. You should have 5" - 6" of vacuum at the strainer cover (your pool dealer can confirm this with a vacuum gauge). You may be able to check by removing the skimmer basket and holding an object over the bottom port with the skimmer full and the pump running. If no suction is felt, check for line blockage.
 - a. If the pump develops a vacuum, check for a blocked suction line or a dirty strainer basket. An air leak in the suction piping may be the cause.
 - b. If the pump does not develop a vacuum and the pump has sufficient "priming water":
 - i. Re-check the strainer housing cover and all threaded connections for suction leaks. Check if all system hose clamps are tight.
 - ii. Check voltage to ensure that the motor is rotating at full rpm's.
 - iii. Open the housing cover and check for clogging or obstruction in suction. Check the impeller for debris.
 - iv. Remove and replace the shaft seal only if it is leaking.

Low Flow – Generally

1. Clogged or restricted strainer or suction line. Contact a qualified repair professional.
2. Undersized pool piping. Correct the piping size.
3. Plugged or restricted discharge line of filter, valve partially closed (high gauge reading). Sand filters – backwash as per manufacturer's instructions; D.E. filters – backwash as per manufacturer's instructions; Cartridge filters – clean or replace the cartridge.
4. Air leak in suction (bubbles issuing from return fittings). Re-tighten the suction and discharge connections using PTFE tape. Inspect other plumbing connections, and tighten as required.
5. Plugged, restricted, or damaged impeller. Replace the impeller including a new seal assembly.

Noisy Pump

1. Air leak in suction piping, cavitations caused by restricted or undersized suction line or leak at any joint, low water level in pool, and unrestricted discharge return lines. Correct the suction condition or throttle return lines, if practical. Holding your hand over the return fitting will sometimes prove this, or by putting in a smaller eyeball fitting.
2. Vibration due to improper mounting, etc. Mount the pump on a level surface and secure the pump to the equipment pad.
3. Foreign matter in the pump housing. Loose stones/debris hitting the impeller could be the cause. Clean the pump housing.
4. Motor bearings noisy from normal wear, rust, overheating, or concentration of chemicals causing seal damage, which will allow chlorinated water to seep into bearings wiping out the grease causing bearing to whine. All seal leaks should be replaced at once.

System Errors

Errors may be communicated through flashing the pump's ring LED. The number of flashes will indicate the type of error as shown in the table below.

# of Flashes	Error Condition	Troubleshooting Steps
1	DC voltage out of range	Indicates that internal DC bus voltage is either too high or too low. Verify that line voltage is within 10% of pump rated voltage at the terminal block. Also, verify that power supply connections are properly made at the circuit breaker as well as at the terminal block, and that the voltage change jumper is set correctly for the intended line voltage connection.
2	Motor current too high	Indicates that motor current is too high. Check impeller, diffuser, shaft seal, and motor for any issues or binding.
3	IPM temperature too high	Indicates that the internal components of the motor drive have become overheated. Motor airflow path should be checked for obstructions and cleared if present. Also, check ambient temperature and verify against motor nameplate.
4	Pump has stalled	Indicates that the motor drive has lost control over motor shaft rotation, or that the motor drive was not able to start the motor. Check impeller, diffuser, shaft seal, and motor for any issues or binding.
5	Internal motor/drive failure	Indicates that there is a problem within the motor and/or motor drive assembly, and that the motor/drive assembly may need to be replaced. Contact Hayward Technical Service for additional assistance.
6	Module Communication Lost	Check that the module LED is on. Ensure the module cable is plugged into the pump. Contact support if unresolved. Standalone operation is available (see page 13).

Note: All errors can be manually reset by pressing the button when the error is shown, or by cycling power applied to the pump after the error has occurred. If the troubleshooting steps listed above do not help to resolve the error condition, then the problem may be internal to the motor/drive. Contact Hayward Technical Service at (908) 355-7995 for additional assistance.

Maintenance

- Clean strainer basket regularly. Do NOT strike basket. Inspect cover gasket regularly and replace as necessary.
- Hayward pumps have self-lubricating motor bearings and shaft seals. No lubrication is necessary.
- Keep motor clean. Keep motor air vents free of obstructions to avoid damage. Do NOT use water to hose off motor.
- Occasionally, shaft seals must be replaced, due to wear or damage. Replace with genuine Hayward seal assembly kit. See "Shaft Seal Change Instructions" in this manual.

Storage / Winterization

⚠ WARNING – Separation Hazard. Do not purge the system with compressed air. Purging the system with compressed air can cause components to explode, with risk of severe injury or death to anyone nearby. Use only a low pressure (below 5 PSI), high volume blower when air purging the pump, filter, or piping.

⚠ ATTENTION – Allowing the pump to freeze with water in it will void the warranty.

⚠ ATTENTION – Use ONLY propylene glycol as antifreeze in your pool/spa system. Propylene glycol is non-toxic and will not damage plastic system components; other anti-freezes are highly toxic and may damage plastic components in the system. Drain all water from pump and piping when expecting freezing temperatures or when storing pump for a long time (see instructions below). Gravity drain system as far as possible. Keep motor dry and covered during storage. To avoid condensation/corrosion problems, do NOT cover or wrap pump with plastic film or bags.

Storing Pump For Winterization

⚠ WARNING – To avoid dangerous or fatal electrical shock hazard, turn OFF power to motor before draining pump. Failure to disconnect power may result in serious personal injury or death.

1. Drain water level below all inlets to the pool.
2. Remove drain plugs and strainer cover from strainer housing.
3. Disconnect pump from mounting pad, wiring (after power has been turned OFF), and piping.

4. Once the pump is fully drained of water, re-install the strainer cover and drain plugs. Store pump in a dry area.

Shaft Seal Change Instructions - TriStar VS 800 Series

IMPORTANT SAFETY INSTRUCTIONS PLEASE READ AND FOLLOW ALL INSTRUCTIONS

When servicing electrical equipment, basic safety precautions should always be observed including the following. Failure to follow instructions may result in injury

- **⚠ WARNING** – To reduce risk of injury, do not permit children to use this product.
- Disconnect all electrical power service to pump before beginning shaft seal replacement.
- Only qualified personnel should attempt rotary seal replacement. Contact your local authorized Hayward Dealer or service center if you have any questions.

Exercise extreme care in handling both the rotating and the stationary sections of the two-part replacement seal. Foreign matter or improper handling will easily scratch the graphite and ceramic sealing surfaces.

Removing the Motor Assembly

1. Remove the six (6) 5/16" x 2" hex head bolts, which hold the motor assembly to the pump/strainer housing, using a 1/2" wrench or socket.
2. Slide the motor assembly out of the pump/strainer housing, exposing the diffuser. Remove the two diffuser screws, and pull the diffuser off of the seal plate to expose the impeller.

Removing the Impeller

3. To prevent the motor shaft from turning, secure using a 5/16" hex wrench in the socket on the motor shaft. The motor shaft is accessed by removing the OmniX module.
4. Rotate the impeller screw clockwise (note that screw has left-hand thread) and remove. Remove the impeller by rotating counterclockwise.

Removing the Ceramic Seat

5. Remove the spring seal assembly and seal plate from the motor by removing the four (4) 3/8" x 1" bolts that secure it to the motor, using a 9/16" wrench or socket. Remove the motor support bracket from the seal plate.
6. Press the ceramic seat with rubber cup out of the seal plate. Use a small screwdriver to tap seal out.
STOP - Clean all recesses & parts to be reassembled. Inspect gaskets & replace if necessary.

Seal Installation

7. Clean and lightly lubricate the motor shaft and seal recesses in the seal plate with a dilute solution of non-granulated liquid-type soap. Gently wipe the polished face of the ceramic seal with a soft cotton cloth. Lubricate the rubber cup on the ceramic seat and press it firmly into the recess of the seal plate, with the polished ceramic surface facing out.
8. Reassemble the motor to the seal plate using the four (4) 3/8" x 1" bolts, and re-attach the motor support to the seal plate. Ensure that the upper two housing bolts are installed in the seal plate prior to mounting the motor to the seal plate.
9. Gently wipe the black, polished surface of the spring seal assembly with a soft cotton cloth.
10. Press the spring seal assembly onto the motor shaft, with the black polished surface facing the ceramic seat.

Replacing the Impeller and Diffuser

11. Screw the impeller onto the motor shaft in a clockwise direction, and screw the impeller screw into the motor shaft in a counterclockwise direction. Tighten snugly by holding motor shaft with wrench as noted in step #3. Place the impeller ring back onto the impeller, with flange facing towards the diffuser.
12. Place the diffuser over the impeller and onto the seal plate, aligning the three pins on the diffuser with the three holes on the seal plate. Replace the two diffuser screws.
13. Replace the OmniX module.

Replacing the Motor Assembly

13. Slide the motor assembly, with the diffuser in place, into pump/strainer housing, being careful not to disturb the diffuser gasket.
14. Fasten assembly to pump/strainer housing using the six (6) 5/16" x 2" bolts. (Be sure housing gasket is in place, and lubricated. Replace if damaged). Tighten housing bolts alternately and evenly to until 185 inch-pounds is reached.

HAYWARD®

Shaft Seal Change Instructions - Super Pump VS 600 Series

IMPORTANT SAFETY INSTRUCTIONS
PLEASE READ AND FOLLOW ALL INSTRUCTIONS

When servicing electrical equipment, basic safety precautions should always be observed including the following. Failure to follow instructions may result in injury.

- **⚠ WARNING** – To reduce risk of injury, do not permit children to use this product.
- Disconnect all electrical power service to pump before beginning shaft seal replacement.
- Only qualified personnel should attempt rotary seal replacement. Contact your local authorized Hayward Dealer or service center if you have any questions.

Exercise extreme care in handling both the rotating and the stationary sections of the two-part replacement seal. Foreign matter or improper handling will easily scratch the graphite and ceramic sealing surfaces.

Removing the Motor Assembly

1. Remove the four (4) 3/8" x 2" hex head bolts, which hold the motor assembly to the pump/strainer housing, using a 9/16" wrench or socket.
2. Slide the motor assembly out of the pump/strainer housing, exposing the diffuser. Pull the diffuser off of the seal plate to expose the impeller.

Removing the Impeller

3. To prevent the motor shaft from turning, secure using a 5/16" hex wrench in the socket on the motor shaft. The motor shaft is accessed by removing the OmniX module.
4. Remove the impeller by rotating counterclockwise.

Removing the Ceramic Seat

5. Remove the spring seal assembly from the impeller and remove the seal plate from the motor.
 6. Press the ceramic seat with rubber cup out of the seal plate. If tight, use a small screwdriver to tap seal out.
- STOP - Clean all recesses & parts to be reassembled. Inspect gaskets & replace if necessary.

Seal Installation

7. Clean and lightly lubricate the motor shaft and seal recesses in the seal plate with a dilute solution of non-granulated liquid-type soap. Gently wipe the polished face of the ceramic seal with a soft cotton cloth. Lubricate the rubber cup on the ceramic seat and press it firmly into the recess of the seal plate, with the polished ceramic surface facing out.
8. Reassemble the motor to the seal plate.
9. Gently wipe the black polished surface of the spring seal assembly with a soft cotton cloth.
10. Press the spring seal assembly onto the impeller shaft, with the black polished surface facing the ceramic seat.

Replacing the Impeller and Diffuser

11. Screw the impeller onto the motor shaft in a clockwise direction. Tighten snugly by holding motor shaft with wrench as noted in step #3. Replace the OmniX module.
12. Place the diffuser over the impeller onto the seal plate

Replacing the Motor Assembly

13. Slide the motor assembly, with the diffuser in place, into pump/strainer housing, being careful not to disturb the diffuser gasket.
14. Fasten assembly to pump/strainer housing using the four (4) 3/8" x 2" bolts. (Be sure housing gasket is in place and lubricated. Replace if damaged). Tighten bolts alternately and evenly until 80 inch-pounds is reached.

Shaft Seal Change Instructions - MaxFlo VS 400 Series

IMPORTANT SAFETY INSTRUCTIONS PLEASE READ AND FOLLOW ALL INSTRUCTIONS

When servicing electrical equipment, basic safety precautions should always be observed including the following. Failure to follow instructions may result in injury.

- **⚠ WARNING** – To reduce risk of injury, do not permit children to use this product.
- Disconnect all electrical power service to pump before beginning shaft seal replacement.
- Only qualified personnel should attempt rotary seal replacement. Contact your local authorized Hayward Dealer or service center if you have any questions.

Exercise extreme care in handling both the rotating and the stationary sections of the two-part replacement seal. Foreign matter or improper handling will easily scratch the graphite and ceramic sealing surfaces.

Removing the Motor Assembly

1. Remove the four (4) 5/16" x 1.75" hex head bolts, which hold the motor assembly to the pump/strainer housing, using a 1/2" wrench or socket.
2. Slide the motor assembly out of the pump/strainer housing, exposing the diffuser. Remove the three (3) diffuser screws and pull the diffuser off of the seal plate to expose the impeller.

Removing the Impeller

3. To prevent the motor shaft from turning, secure using a 5/16" hex wrench in the socket on the motor shaft. The motor shaft is accessed by removing the OmniX module.
4. Remove the impeller by rotating counterclockwise.

Removing the Ceramic Seat

5. Remove the spring seal assembly and seal plate from the motor by removing the four (4) 3/8" x 1" bolts that secure it to the motor, using a 9/16" wrench or socket.
 6. Press the ceramic seat with rubber cup out of the seal plate. If tight, use a small screwdriver to tap seal out.
- STOP - Clean all recesses & parts to be reassembled. Inspect gaskets & replace if necessary.

Seal Installation

7. Clean and lightly lubricate the motor shaft and seal recesses in the seal plate with a dilute solution of non-granulated liquid-type soap. Gently wipe the polished face of the ceramic seal with a soft cotton cloth. Lubricate the rubber cup on the ceramic seat and press it firmly into the recess of the seal plate, with the polished ceramic surface facing out.
8. Reassemble the motor to the seal plate using the four (4) 3/8" x 1" bolts. Torque the bolts to 100 inch-pounds.
9. Gently wipe the black, polished surface of the spring seal assembly with a soft cotton cloth.
10. Press the spring seal assembly onto the motor shaft, with the black polished surface facing the ceramic seat.

Replacing the Impeller and Diffuser

11. Screw the impeller onto the motor shaft in a clockwise direction. Tighten snugly by holding motor shaft with wrench as noted in step #3. Replace the OmniX module.
12. Place the diffuser over the impeller and onto the seal plate, aligning the three (3) pins with the matching holes in the seal plate. Note: Flat side of diffuser rim will face up. Replace the three (3) diffuser screws and torque to 20 inch-pounds.

Replacing the Motor Assembly

13. Slide the motor assembly, with the diffuser in place, into pump/strainer housing, being careful not to disturb the diffuser gasket.
14. Fasten assembly to pump/strainer housing using the four (4) 5/16" x 1.75" bolts. (Be sure housing gasket is in place, and lubricated. Replace if damaged). Tighten bolts alternately and evenly until 185 inch-pounds is reached.

Replacement Parts

TriStar VS 800 Series

Ref. No.	Part No.	Description
1	SPX3200UNKIT	Union Connector Kit (Includes 2 Nuts, Connectors & Gaskets)
2	SPX3200A	Pump Strainer Housing, 2" x 2 1/2" with Drain Plugs
3	SPX3200DLS	Strainer Cover Kit (Includes Strainer Cover, Lock Ring & O-Ring)
4	SPX3200M	Strainer Basket
5	SPX3200Z8	Diffuser Screw
6	SPX4000Z1	Diffuser O-Ring
7	SPX3200B3	Diffuser
8	SPX3200Z1	Impeller Screw
9	SPX3021R	Impeller Ring
10A	SPX3207C	1.25THP Impeller with Impeller Screw
10B	SPX3210C	1.85THP Impeller with Impeller Screw
10C	SPX3215C	2.25THP Impeller with Impeller Screw
11	SPX3200T	Housing O-Ring
12	SPX3200E	Seal Plate
13	SPX3200Z211	Housing Insert/Seal Plate Spacer Kit
14	SPX3200Z3	Housing Bolt
15	SPX3200Z5PAK4	Motor Bolt (package of 4)
16	SPX4000FG	Drain Plug with O-Ring
17	SPX3200S	Strainer O-Ring
18	SPX3200GA	Motor Support
19A	VSX32810PE	1.25 HP Power End includes #5-#12, #15, #18, #19, #22, #23, #24
19B	VSX32815PE	1.85 HP Power End includes #5-#12, #15, #18, #19, #22, #23, #24
19C	VSX32820PE	2.25 HP Power End includes #5-#12, #15, #18, #19, #22, #23, #24
20	SPX3200Z211	Housing Insert/Seal Plate Spacer Kit
21A	SPX3200WF	Optional Riser Base (aligns with Pentair® WhisperFlo® pump*)
21B	SPX3200SR	Optional Riser Base (aligns with Pentair® WhisperFlo® pump*)
22	SPX3200Q2	Motor Support Adapter
23A	SPX3200SA	Shaft Seal Assembly
23B	SPX4000SAV	Shaft Seal Assembly (Viton)
24	VSPOMNIX	OmniX Module

Super Pump VS 600 Series

Ref. No.	Part No.	Description
1	SPX1600T	Housing Gasket
2A	SPX1600Z2	Shaft Seal Assembly
2B	SPX1600Z2VIT	Shaft Seal Assembly (Viton)
3	SPX1600Z52	Mounting Foot Screws (Set of 2)
4	SPX3200Z5PAK4	Motor Cap Screws (Set of 4)
5	SPX2600G1	Mounting Foot, VSP (Includes Screws)
6	SPX2600E5	Seal Plate

HAYWARD®

Supplier's Declaration of Conformity

47 CFR § 2.1077 Compliance Information

Unique Identifier: 400/600/800 Series Variable Speed Pumps

FCC Responsible Party:

Hayward Industries, Inc.

One Hayward Industrial Drive

Clemmons, NC 27012

www.hayward.com

Contains FCC ID: RNW-BT923

Contains IC ID: 5110A-BT923

In order to avoid the possibility of exceeding the FCC radio frequency exposure limits, human proximity to the antenna should not be less than 20cm during operation.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by Hayward could void the user's authority to operate this equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio / TV technician for help.

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

This device complies with Industry Canada license exempt RSS standard(s). Operation is subject to the following two conditions:

- (1) This device may not cause interference, and
- (2) This device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes:

- (1) l'appareil ne doit pas produire de brouillage, et
- (2) l'utilisateur de l'appareil doit accepter tout brouillage radio-électrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.
