# **#5165**

Guidebook (#2004B) amplifies these instructions and should be read to use this product properly.

- TIPS 1. Keep test kit out
- of reach of
- children. 2. Read precautions
- on all labels.
- 3. Store test kit in cool, dark place.
- Replace reagents 4
- once each year.
- 5. Do not dispose of solution in pool or
- spa 6. Rinse tubes
- before and after each test.
- 7. Obtain samples 18" (45 cm)
- below water surface.
- 8. Hold dropper bottle vertically
- when dispensing reagent.
- Match colors in sunlight while facing north.
- **Ataylor**

1. Fill small tube to 9 mL mark with sample water. 2. Add 5 drops R-0001 and 5 drops R-0002. Cap and invert to mix.

Free, Combined & Total

Chlorine (DPD)

- 3. Match color.\* Record as ppm free chlorine (Cl<sub>2</sub>).
- 4. Add 5 drops R-0003. Cap and invert to mix.
- 5. Match color immediately. Record as ppm total chlorine
- (Cl<sub>2</sub>). 6. Subtract free chlorine (FC) from total chlorine (TC). Record as
- ppm combined chlorine (CC) as  $(Cl_2)$ . Formula: TC – FC = CC.

OR

### **Total Bromine**

- 1. Fill small tube to 9 mL mark with sample water.
- 2. Add 5 drops R-0001 and 5 drops R-0002. Cap and invert to
- mix 3. Match color.\* Record as ppm
- total bromine (Br<sub>2</sub>). \*If color is off-scale: Repeat test
- using 4.5 mL sample diluted to 9 mL mark with tap water. Multiply reading by 2 to obtain approximate
- sanitizer level If color is still off-scale: Repeat test using 1.8 mL sample diluted to
- 9 mL mark with tap water. Multiply reading by 5 to obtain approximate sanitizer level.

- Free & Combined Chlorine (FAS-DPD) 1. Fill large tube to desired mark with sample water. NOTE: For 1 drop = 0.2 ppm, use 25 mL sample. For 1
- drop = 0.5 ppm, use 10 mL sample. 2. Add 2 dippers R-0870. Swirl until dissolved. If free chlorine is present, sample will turn pink NOTE: If pink color
- disappears or no pink color develops, add R-0870 until color turns pink. 3. Add R-0871 dropwise, swirling and counting after
- each drop, until color changes from pink to colorless. 4. Multiply drops in Step 3 by drop equivalence (Step 1).
- Record as ppm free chlorine (Cl<sub>2</sub>). 5. Add 5 drops R-0003. Swirl to mix. If combined
- chlorine is present, sample will turn pink. 6. Add R-0871 dropwise, swirling and counting after each drop, until color
- changes from pink to colorless. 7. Multiply drops in Step 6 by drop equivalence (Step 1). Record as ppm combined

chlorine (Cl<sub>2</sub>).

1. Fill large tube to 44 mL mark with sample water. 2. Add 5 drops R-0004. Cap and invert to mix. 3. Match color. Record as pH units. If color is between two values, pH is average of the two. To

nH

- LOWER pH: See Acid Demand. To RAISE pH: See Base Demand. Acid Demand
- 1. Use treated sample from pH test. 2. Add R-0005 dropwise.
- After each drop, count, cap and invert to mix, and compare color until desired pH is matched. See Treatment Tables in Guidebook (#2004B) to continue

## **Base Demand**

- 1. Use treated sample from pH test.
- 2. Add R-0006 dropwise. After each drop, count, cap and invert to mix, and compare color until desired pH is matched. See Treatment Tables in Guidebook (#2004B) to continue.

- 1. Fill large tube to 25 mL mark with sample water.\* 2. Add 2 drops R-0007. Swirl to mix. 3. Add 5 drops R-0008. Swirl to mix.
  - Sample will turn green. 4. Add R-0009 dropwise, swirling and

Total Alkalinity (TA)

- counting after each drop, until color changes from green to red.
- 5. Multiply drops in Step 4 by 10. Record as ppm total alkalinity as calcium carbonate (CaCO<sub>3</sub>). \*When high TA is anticipated: Use
- 10 mL sample, 1 drop R-0007, 3 drops R-0008, and multiply drops in Step 4 by 25.

#### Calcium Hardness (CH) 1. Fill large tube to 25 mL mark with

- sample water. 2. Add 20 drops R-0010. Swirl to mix.
- 3. Add 5 drops R-0011L. Swirl to mix.
- If calcium hardness is present, sample will turn red.
  - 4. Add R-0012 dropwise, swirling and counting after each drop, until color changes from red to blue. 5. Multiply drops in Step 4 by 10.
  - Record as ppm calcium hardness as calcium carbonate (CaCO<sub>3</sub>).
  - \*When high CH is anticipated: Use 10 mL sample, 10 drops R-0010, 3 drops R-0011L, and multiply drops in Step 4 by 25.

# Cvanuric Acid (CYA)

- 1. Fill bottle (#9191) to 7 mL mark with sample water.
- 2. Add R-0013 to 14 mL mark. Cap and mix for 30 seconds.
- 3. Transfer cloudy solution to small tube until black dot on bottom just disappears when
- viewed from top. 4. Read tube at liquid level on back of comparator block.
- Record reading as ppm cyanuric acid (CYA).

### Sodium Chloride (Salt)

- For 1 drop = 200 ppm1. Fill tube (#9198) to 10 mL
- mark with sample water.
- 2. Add 1 drop R-0630. Swirl to mix. Sample will turn yellow.
- 3. Add R-0718 dropwise, swirling and counting after
- each drop, until color changes from yellow to a milky salmon (brick red). NOTE: A white precipitate will form as R-0718 Silver Nitrate Reagent is added to the
- sample. First change from yellow to a milky salmon (brick red) is the endpoint.
- 4. Multiply drops of R-0718 by 200. Record as ppm sodium chloride (NaCl).

See reverse.

#### Range Limitations:

0–10 ppm Free, Combined (DPD) 0–20 ppm Free & Combined Chlorine (FAS-DPD) 0–20 ppm Total Bromine 7.0–8.0 pH 30–100 ppm CYA **Contact:** Please visit www.taylortechnologies.com for replacement parts and additional information.

### **NSF 50 Classification:**

(DPD) Free Chlorine – L3 (Pool and Spa/Hot Tub) (DPD) Combined Chlorine – L3 (Pool and Spa/Hot Tub) (FAS-DPD) Free Chlorine, 1 drop = 0.2 ppm – L1 (Pool and Spa/Hot Tub) (FAS-DPD) Free Chlorine, 1 drop = 0.5 ppm – L1 (Pool and Spa/Hot Tub) (FAS-DPD) Free Chlorine Syringe Method – L1 (Pool and Spa/Hot Tub) (FAS-DPD) Combined Chlorine, 1 drop = 0.2 ppm – L2 (Pool), L1 (Spa/Hot Tub) (FAS-DPD) Combined Chlorine, 1 drop = 0.5 ppm – L3 (Pool), L1 (Spa/Hot Tub) (FAS-DPD) Combined Chlorine Syringe Method – L1 (Pool and Spa/Hot Tub) (FAS-DPD) Combined Chlorine Syringe Method – L1 (Pool and Spa/Hot Tub) Total Bromine – L3 (Pool), L3 (Spa/Hot Tub) pH – L3 (Pool), L3 (Spa/Hot Tub) Cyanuric Acid – L3 (Pool), L3 (Spa/Hot Tub)
