

# Fence - Above Ground

---

## Butress or buttress

Yes GLI above ground fence will work on a pool that has butresses. They should only come about halfway up the pool wall but if they go to the top our fence will not work.

## Cantar vs GLI

Only the brackets have changed since Cantar. All other parts are compatible.

## Gate

- If installed correctly then gravity will close the gate making it self closing.
- Gate Hardware Kit comes with 1 bag of (10) # 2 x 1" screws and (56) #8 x 3/4" screws

## Installation Questions

**Can the fence be installed around a Ladder?** See installation instructions. The ladder should be right next to an upright – if there is not an upright at that point an artificial upright should be made to fit in that area.

**What is an artificial upright?** This is a 4x4 piece of wood installed on the side of the pool to allow the AG fence to be installed appropriately.

**How can the fence be cut to size by the customer?** Using hack-saw, PVC saw or circular saw

**Can an above ground fence be installed on rounded uprights?** No, it must be installed on a flat surface.

## Material Specs

Fence material - Resin

Screws - Galvanized Steel -NOT stainless steel

## Posts

An **END POST** has pre-punched holes on one side so that the rail can fit into it, a post will not have these.

There will be a **POST CAP** on the top of the upright only. The bottom is left open so water will drain out.

## Shipping Information

**Does the AG fence ship on a pallet?** 3 or more sections will ship on a pallet. Class 85

## Top Seat or Cap and Required Kits

Top seats or caps are the top rails of the above ground pool between the uprights. See the photo below.
